Subject: RE: Question on status of CA725 and CA750 for Navy/Grumman Bethpage

Good morning Henry – I am following up on my email to Dan, from November 2017. FYI, the EPA oversight lead was transferred back to the RCRA program and I was at the area yesterday. When you have the chance, pls let me know the status of the CA725 for Navy/Grumman Bethpage. Is DEC still involved with asking Grumman to evaluate former plant properties for vapor intrusion? (Would this be your office's lead or DER's lead?) Are there additional obstacles to achieving CA725?

Thanks,
Carol

Subject: RE: Question on status of CA725 and CA750 for Navy/Grumman Bethpage

Hi Carol,

I would consider both of those dates fuzzy at best. We have been working with Grumman on doing some VI at former plant properties that have since been sold off. It would not be appropriate to issue the 725 while we are still asking them to evaluate properties. Some progress has been made, but as always with Grumman, it is slow.

750 will be dependent on the current effort to contain the plume. Given the magnitude of that project, it would be surprising to achieve control by 2020.

Let me know if you have any additional questions,

Daniel Evans

Subject: Question on status of CA725 and CA750 for Navy/Grumman Bethpage

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Good morning Henry and Dan. I was asked to look at the list of projections for New York State facilities, and I noticed the following for Navy/Bethpage:

CA725 (Current Human Exposure Under Control): 03-31-19 projection;

CA750 (Groundwater Migration Currently Under Control): 09-30-2020).

When you have the chance, please drop me a line to let me know whether these projections look accurate to you, especially regarding the CA725 where the projected completion is less than 18 months from now, and my recollection is that there was still some on-going work.

Thanks,

Carol
